

Application of Mupirocin Topical Ointment for MRSA and MSSA positive patients

To use the nasal ointment:

- Wash your hands with soap and water before and after using this medicine.
- Apply approximately 1/2 of the ointment from the single-use tube directly from the tube into one nostril. Then apply the remainder of the ointment directly into the other nostril.
- Close your nostrils by pressing the sides of the nose together and then releasing them. Do this over and over again for 1 minute. You may also press the sides of the nose together and gently massage the nose. These will help spread the medicine throughout the inside of the nostrils.
- Throw away the tube after each use.
- If you miss a dose of this medicine, take it as soon as possible. However, if it is almost time for your next dose, skip the missed dose and go back to your regular dosing schedule. Do not double doses.

Bactroban nasal ointment step-by-step guide

A nasal ointment called Bactroban which should be used TWO times a day for 5 days.					
					
1. Wash and dry your hands.	2. Unscrew the cap and squeeze a small amount of ointment, about the size of a match-head onto your little finger.	3. Apply ointment to the inside of one nostril.	4. Repeat steps 2 and 3 for the other nostril.	5. Close your nostrils by pressing the sides of the nose together for a moment. This will spread the ointment inside each nostril.	6. Wash and dry your hands. Then replace the cap on the tube.
